

KPI#3 Length of Calving Season

Count the number of days between the first and last calf born after the breeding season that has just completed. Aim for a benchmark of 63 days or 3 estrous cycles of 21 days each. A shorter calving season will help you achieve more consistent results with the calves you market and will help simplify management during calving time.

Calculate length of your calving season:

Day 1 of calving season: _____

Final day of calving season: _____

Total length of calving season:
